

Mission & Vision of the ESPU

Work session 07/12/18

The Mission of the ESPU

- In everything we do, we want to increase/promote best personalized care in children & adolescents with any genito-urinary conditions, independent of where they come from and who they are
- Therefore we put the child at the centre, from a lifelong perspective, enabling them (and their care givers) to make an informed choice
- As a leading independent European based society of paediatric urology professionals,
 - We are **the** resource for specialized practitioners worldwide
 - *providing education & European qualification*
 - *facilitating transfer of state of the art knowledge & information, scientific exchange & international collaboration through multidisciplinary networks*
 - *defining evidence based standards & guidelines for quality of care*
 - We help patients & care givers to find the best care
 - We act as an influencer for policy makers directing the future of health care within our field

Our vision: We achieve this mission by

- Adapting what and how we communicate, reaching all stakeholders (patients & care givers, professionals, ...)
- Activating the next generation within the ESPU
- Defining what is a good urology professional and getting official/formal recognition for our sub specialty
- Educating (young) professionals in light of this quality definition
- Evaluating & reinforcing our research programme
- Increasing our funding (charity, pharmaceutical, community, ...)
- Improving the interface with adult urology (transition)
- Increasing involvement of patients & care givers
- Focusing on our independence while staying collaborative
