

How to open an app from an unidentified developer and exempt it from Gatekeeper

If you are confident the app downloaded from the Internet is the latest version and is from a source you trust, you can open an app from an unidentified developer by following these steps.

Note: In most cases, you will only have to perform these steps once for all user accounts on the Mac:

1. In Finder, Control-click or right click the icon of the app.
2. Select **Open** from the top of contextual menu that appears.

3. Click **Open** in the dialog box. If prompted, enter an administrator name and password.

Note: If there is an app that presents multiple Gatekeeper dialog boxes, you can temporarily use Gatekeeper's "Always" option. Make sure to restore the Gatekeeper option that was there before to bring back Gatekeeper function.
